Abstract (en)
[origin: EP1099903A1] The light has a long light body, which is held by two mountings (8) fitted at the end faces. At least one of the mountings can be moved between an operation position, in which the lamp is partly surrounded by a reflector casing (4), and at least one removal position outside the casing. The movable mounting slides perpendicularly to the light axis (X) into the removal position. Holders (5,6) for the movable mounting have catch (13) elements to secure the mounting in the two positions. An Independent claim is included for a holder for the light mounting.
