Abstract (en)
[origin: WO0005950A1] An improved method of making agricultural formulations and latex polymers is provided, wherein the method utilizes at least one ethylenically unsaturated monomer, at least one polymerizable surface active agent and at least one technical. The polymerizable surface active agent is capable of co-polymerization with traditional monomers used to form latexes and is preferably substantially completely consumed during the course of the polymerization. The latex polymers of the instant invention are well suited for use in preparing agricultural formulations which contain a pesticide or a herbicide. Polymers produced by the method of the present invention, in combination with a variety of pesticides and herbicides, are well suited for use in agricultural crop protection.
