Abstract (en)
[origin: WO9966994A1] To be able to utilize the kinetic energy which is due to the travelling speed of or the push-off energy introduced by the skier for a longer period than was possible with known skis, the invention provides for at least one of the lateral surfaces of the ski, notably the cross-country ski (SK), to be convex or parallel in the central area and concave in the front and/or rear area.
