Abstract (en)

[origin: WO0005526A1] The invention concerns a device comprising: a flanged socket (3) made of a material capable of being welded or bonded on the pipe and consisting of a part (9a) with small diameter fitted and welded on the pipe rear cylindrical bearing surface, said fitting being produced by forming a ring-shaped housing (15), and a part (9b) of larger diameter forming a socket; a stop joint (4) with T-shaped cross section, formed by a ring (13) whereof one side is inserted into the ring-shaped housing (15) and by a radial collar (14) whereof one face presses against the pipe front end surface; and a sealing joint (5).
