Abstract (en)

[origin: FR2781891A1] The invention concerns a device a fixing member (1) associated with the hinge element (5, 6) and anchored by overmoulding in a frame bow (8) or front flank (9) obtained by moulding. Said fixing member (1) comprises a first plate (2) bearing the hinge element (5, 6), or the housing, and which via a central bridge (4) is linked to a second plate extending substantially parallel to the first. The central bridge (4) extends transversely in said bow (8) or front flank (9) while being completely embedded in the moulded material of said bow or front flank. The second plate (3) projects outside the outer surface of the bow (8) and of the front flank (9) and has a surface forming an ornament.
