Abstract (en)  
[origin: DE19924869A1] The invention relates to a transport cart (1) that can be pushed. Said transport cart is provided with a token-operated lock (8) and at least one device (7) that is located outside the token-operated lock (8) and is operated by electric energy. Said device (7) is supplied with electric energy via an electric circuit (14) that is fed by an energy source (6) on the transport cart (1). The invention is also characterized in that the token-operated lock (8) is integrated in the electric circuit (14) and that the electric circuit (14) is closed by the action of a switch element (12) inside the token-operated lock (8) once the token is inserted and that it is broken once the token is returned.
