Abstract (en)
[origin: DE19930558A1] A switch contact, fitted to a slide (7) moved between two positions by an actuating mechanism, moves away from a fixed contact (5) in position one but makes contact with it in position two. An elastic mechanism, designed as an primary spring (10) fitted on the slide like an action point spring, operates on moving the slide with a shift point connecting link. An elastic force acts against the slide's movement up to a change-over point reached while passing the action point.
