Abstract (en)
[origin: WO0101644A1] An apparatus for securing the user's secret information transmitted from a mobile station is provided in a mobile communications system in communication with a web server through an Internet service server, wherein the data relating to the user's secret information is selected in response to the data request from the mobile station and/or web server, the selected data is enciphered in a given format, and the enciphered data is directly transmitted to the web server and/or the mobile station without any additional processing operation by the service server.
