Abstract (en)
   The rear and side parts (1) are made of flexible textile surfaces whose recoil force is distributed evenly between side and rear. The bust and rear
   parts as well as both sides have closure edges and thread-free outer surfaces. Rear and side parts (1) consist of an outside layer and an inside layer
   so the outsides form the closure edges and the edge of the outside layer is folded inwards towards the edge of the inside layer so that at the closure
   edges the inner layer is sandwiched singly by the outside layer on one side and sandwiched doubly on the opposite side. The bust part has an area
   of reduced eleasticity and the support part (2) is reinforced by a flexible textile inlay arranged between outside and inside layers as specified. The
   inside layer is knitted or woven and the closure edges in overlock stitch.

Abstract (de)
   Die Erfindung betrifft Büstenhalter bei welchem textile Flächen mit die elastischen Fasern gleichmässig auf Rücken- und Seitenpartien verteilt ist.
   Die Trägerpartie kann zusätzliche Verstärkungseinlagen mit enthalten, die zwischen der Aussenschicht und der Innenschicht eingearbeitet und
   vollständig verdeckt sind. Die Nähte sind derart gestaltet, dass die Aussenflächen keine Nahtfäden aufweisen. <IMAGE>
