Abstract (en)

[origin: EP1101846A2] A controller (24) momentarily augments the feed rate for the sliver (5) to prevent the formation of a length of yarn just after piecing that is thinner than the steady rate thickness. The required augmentation is determined by carrying out several test spins and measuring (23) the yarn thickness. A trace of the yarn thickness during start-up is shown on a display (28).
