Abstract (en)
[origin: EP1101890A2] The lock has at least one bolt (1,2), a release lever for the bolt, a locking lever (5) and an operation lever (4). The operation lever is elastically coupled to the release lever, at least when the locking lever is in the locked position. The coupling is achieved by an operation spring (12) rotatably fixed to the operation lever. Preferably, the spring is a leg spring, with one leg cooperating with an operation component at the release lever.
