Abstract (en)  
[origin: EP1102216A2] The access control system detects personal data and biometric data for an individual, for checking the personal data against a wanted list and checking the biometric data against identification data provided by an identification medium carried by the individual, during movement of the individual between entry and exit gates (12,14), the authenticity of the identification medium verified before entering the entry gate. The operation of the entry gate is prevented when the identification medium is falsified and the operation of the exit gate is only permitted upon verification of all data.
