Abstract (en)

[origin: WO0076022A1] An antenna mount for a station for mobile telephony, comprising a central mount section for mounting at least one antenna, wherein against the outer side of said mount section, at least one fastening element is provided whose side facing away from the mount section comprises juxtaposed receiving means, wherein in a number of said receiving means a cable is secured, while connectors are provided which support a number of cover plates extending along said mount section, thereby at least substantially covering the cables and the mount section.
