Abstract (en)

[origin: WO0008834A1] A method for actuating faults on a plurality of modules (C1, C2...Ci...Cn) of electronic equipment entails equipping said modules (Ci) with respective fault actuating means (1), and associating said modules (Ci) with control units (3) of said respective fault actuating means (1). These control units (3) can control the selective actuation of faults by the fault actuating means (1) depending on respective fault actuation control signals. The various control units (3) are connected by means of a bus structure (4), preferably of the balanced serial type. Means (5, 6) are provided for generating the fault actuation control signals and sending them towards the control units (3) through the bus structure (4).
