Abstract (en)

[origin: EP1103663A1] A precast capping beam element comprises a parallel pair of concrete retaining panels connected together by reinforcing rods cast into both panels and projecting into the space therebetween. One panel may be larger than the other. A method is also disclosed for forming a capping beam of a pile wall by placing the capping beam element over a line of piles so that the reinforcing rods of the piles project into the space, and filling the space with concrete. <IMAGE>
