Abstract (en)

[origin: EP1103695A2] Equipment attaches a soil drilling tool onto a mast. A carriage moves on runners extending along a face of the mast. A mounting head is at one end of an upper end of the tool and rotates it about its longitudinal axis. The head is mounted on the carriage and pivots about an axis orthogonal to the mast axis so that the tool axis is at an angle (a) to the mast axis. A movable assembly platform for the tool is at ground level.
