Abstract (en)
The arrangement has the thermal printing head (29) and transport rollers (47) spatially separated from each other by outward movement of the carrier from the housing (2) of the tachograph (1). Movement of the carrier from the housing causes the thermal printing head (29) and the transport roller to be assigned to each other, after a resulting insertion of a reel (32) in the carrier, with the reverse movement of the carrier in the housing (2). A start section (38) of the printing material is automatically stretched, protruding in a suitable length, between the thermal printing head (29) and the transport roller (35). After a resulting back movement of the carrier between a front plate (17), the roller is limited to the front side of the carrier and a front wall (3) of the tachograph (1).

Abstract (de)
Bei dem vorgeschlagenen Fahrtsschreiber werden ein Thermodruckkopf (29) und eine Transportwalze (35) räumlich voneinander getrennt. Ein in geeigneter Länge abstehender Anfangsabschnitt (38) des Druckmaterials (32) wird beim Schließen der Schublade (28) selbsttätig zwischen dem Thermodruckkopf (29) und der Transportwalze (35) eingespannt. Einer der Schließspalte der Schublade (28) ist als Ausgabeschlitz (24) für die erstellten Druckbelege ausgebildet. <IMAGE> <IMAGE>
