Abstract (en)

[origin: EP1104160A2] In a document processing apparatus comprising a plurality of machine modules for processing and/or producing printed media, including a designated sample destination, a method to generate samples of portions of a main job during the production of the main job comprises: generating a document assembly tree having nodes that describe portions of the main job, including in the node descriptions, keywords that specify a sample delivery interval, and producing the job and sample jobs as indicated by the document assembly tree. <IMAGE>
