Abstract (en)
[origin: WO0009038A2] An anchoring means for a joint prosthesis (4) tapers in a direction away from the joint prosthesis (4) but may be mounted in a bore through an inlet opening distal from the joint to be replaced. The anchoring means may comprise a tapering pin (53) which is cemented in place. Alternatively, the anchoring means may comprise a pin (3) and one or more retaining means (2, 3) which can be placed in the bore separately and manoeuvred such that the anchoring means tapers. Thus, a tapering anchoring pin is provided for a minimally invasive joint replacement technique.
