Abstract (en)
[origin: WO0070640A1] The invention relates to a lamp (1) with a base (2). Said base (2) has a base bottom (8), on the outside of which at least one base bottom contact plate is located. Each base bottom contact plate has at least one opening. The material of each opening is bent round into a tongue in such a way that this tongue engages in the base bottom. This ensures that the contact plate is better anchored in the base bottom.
