Abstract (en)
[origin: DE19837947A1] The spigot to draw off liquid from a container, such as a flexible bag within a box, has a tubular housing body (18) closed at one end by a membrane end disk (24). A lateral member (26) is mounted to it with a projecting valve push rod (44) for a valve plate (42) at the outlet (41) to deliver the liquid from one side of the housing body. A section of the member projects from the housing, to give a knob body (28) to operate the valve and draw liquid out of the container.
