Abstract (en)

[origin: WO0011547A1] A processor system is formed from a branch processor (fig. 1, unit 110) and a main processor. The main data processor (fig. 1, unit 20) operates like conventional processors. The branch processor operates to determine the amount of branches and information to provide information that is usually speculatively figure out. Synchronizer is used occasionally to synchronize branch processor and data processor through feedback channel (fig. 1, unit 122).
