Abstract (en)
[origin: US2001002080A1] Interface plate (1) intended to be inserted between a snowboard binding and the upper face of a snowboard, and which comprises: an essentially circular central zone (2) through which the screws (38) for attaching the binding to the board can pass; two outer zones (3, 4) of a width smaller than the diameter of the central zone (2), arranged symmetrically with respect to the central zone (2), and of which the ends furthest from the central zone (2) act as supports for diametrically opposed zones of the binding so as to transmit the forces exerted from the binding to the board only at said outer zones (34) which are advantageously located near to the edges (9, 10).
