Abstract (en)

[origin: DE19958103C1] The press tool has 8 press surfaces (9) displaced radially relative to the press axis (A) in synchronism, via a pair of outer control bodies (3,4), which each have 2 control surfaces (5) at 90 degrees to one another, with the angular bisector between them lying in a symmetry plane (E) passing through the press axis. Each control surface is provided with 2 inner control bodies (7), for acting on the press surfaces, positioned symmetrical to further symmetry planes (E1,E2,E3,E4) at 45 degrees to the first symmetry plane.
