Abstract (en)
The invention concerns a multiple part lid (2) for a refuse container (1). The lid is distinguished by comprising an upper lid (9) and a lower lid (8) which may be opened in each their direction. By filling refuse into the container, the upper lid functions as lid for the refuse container, and when the refuse is emptied from the container, the lower lid is used together with the upper lid as the aggregate lid for the refuse container. The use of a multiple part lid implies that it is not necessary to turn the refuse container depending on whether refuse is to be filled into the container or whether the container is to be taken away for emptying. <IMAGE>
