Abstract (en)
A coat film transfer head device provided with a structure that absorbs strong shocks applied to the head and reliably prevents damage to the head and breakage of the coat film transfer tape. There is provided a shock absorbing structure (3) that absorbs the shocks applied to the head body (20) for press-transfer of the coat film transfer tape (T), and even when the coat film transfer tool (1) is dropped during one-handed operation or transport for instance, giving strong shocks to the head body (20), such shocks will be effectively absorbed by the shock absorbing structure (3) so that the tip pressure piece (20c) of the head body (20) may be prevented from damage or the like. <IMAGE>
