Abstract (en)

This invention relates to a fabric product fixing device (10) for fixing a fabric product including a T-shirt to which an image formed by using printer, for example, a dye sublimation printer, a thermal wax printer, or the like, will be thermally transferred. The fixing device (10) comprises a box body member (100), a transfer table member (200) and a stopper member (300). The stopper member is disposed so that a mounting portion (201) of the transfer table member can penetrate an opening (301) of the stopper member. An image-transferred portion of T-shirt (400) is held spreading on the mounting portion to prevent wrinkling and it is exposed outside through an opening (105) of the top plate portion (102) of the box body member (100). <IMAGE>
