Abstract (en)  
[origin: EP1106753A1] A universal anti-drilling plate (8) for a cylinder lock with a rotor/false stator assembly in which the rotor (4) has a collar (7) covering the end face of the false stator (3) and a slot (9) for a key (5). The plate is made by fritting or moulding from a material that is resistant to drilling. e.g. a hard steel alloy with an Rm resistance of over 500 MPa, and is connected to the rotor by one or more projecting pegs (12) engaging with the rotor slot but without hindering the insertion of the key.
