Abstract (en)  
[origin: EP1108453A2] The binding has a front sole holder, a heel holder, a tension member connecting heel to ski, and an accessory to limit lift of the heel off the ski. The accessory unit (8) applies a spring force to the tension member (2), which is directed against the tension force, once a pre-set lift limit of the raised heel has been exceeded. The accessory is adjustable relative to the ski in tension direction of the tension member.
