Abstract (en)

[origin: EP1108475A2] The device has a paint container (12) and a sprayer (18) that can be brought to an electrical potential relative to the object and electrostatically isolated from the paint feed by an electrostatic isolating device with an insulating line (22) also forming the pint feed to the container and a pad (24) movable reciprocally in the line that removes electrically conducting coating material from the inner surface of the line as it passes through it. Independent claims are also included for the following: the use of a scraper movable through a guide section to electrostatically isolate two system parts.
