Abstract (en)  
[origin: EP1108504A1] The machine has a driven rotating tool holder (10) with locking part (14,16), e.g. a roller, engaging in a groove (20) in the end (18) of a tool shaft (12), and retained by a locking element (22). The locking element is held by a snap-locking (28) in a position, which the locking part is radially free, and is loaded by a spring (30) in locking direction. The snap-locking has a part (34), which projects into a holder space (32) of the tool holder, to release locking when the tool is inserted.
