Abstract (en)

[origin: EP1108656A2] The container has two sections(2,3) interconnected by a hinge along a common edge(6) and which can pivot in relation to each other by up to 360 degrees. One section(2) has outwards curved chambers(4) to hold the fluid or paste substances, and a plunger section(3) with outwards curved strip-form protrusions(5). The two container sections are interconnected so that for delivering the substances in the chambers the strip-form protrusions by pivoting around the common edge are brought into the delivery position and pressed into the chambers.
