Abstract (en)

[origin: EP1108841A2] The adjustable band is for the rotatively movable fixture between fixed side parts and panes of complete glass plates (5). A holding piece is securely adhered on the outside with the complete glass plate. In a hollow space (9) of the holding piece, an adjustment device (10) is floatingly located, which through a front-side aperture (11) in the holding piece is connectable with a band flange (2). In the band flange a rear-side recess (12) is formed, which the holding piece overtops with clearance. In the adjustment device threaded bores (15) and in the band flanges bore holes (13) are formed, in which fixture components (14) are formed.
