Abstract (en)
[origin: DE19960450C1] Glass pane unit clamped pane (2) with electrical conductor structure(10) on its surface and electrical connecting wires are led to edge of pane(2). The protective layer (15) is a non-conductive plastics film which, after the wires have fused, is against the glass pane (2) in a force fit or material bond with the connections (11). The glass pane unit (1), for an alarm box, has at least one clamped pane (2) with an electrical conductor structure (10) on its surface and the electrical connecting wires are led to the edge of the pane (2). One connecting wire is insulated against the other and has a non-conductive thin protective layer on the side away from the glass pane (2). The protective layer (15) is a non-conductive plastics film which, after the wires have fused, is against the glass pane (2) in a force fit or material bond with the connections (11).
