Abstract (en)
[origin: WO0013984A1] The invention concerns a device (1) for sealing a bottle (4) containing a sparkling wine and comprising a stopper (2), particularly made in cork or a synthetic material, capable of being inserted in the neck (3) of said bottle (4), maintained thereon by a wire cap (6), and run through in the axial direction, by a conduit (8) comprising first (10) and second (11) ends capable of communicating respectively with the bottle (4) internal volume and external volume, said second end (11) being closed by a retractable closure (12). Said device (1) is characterised in that the stopper (2) is axially run through by an orifice (13) designed to receive said conduit (8) and having an adjusted and tight cross-section relative to said conduit (8) external section, the latter (8) being provided, at its second end (11), with a support flange (16) capable of resting against said stopper (2) upper surface (17).
