Abstract (en)  
[origin: WO0013986A1] The invention relates to a container (1) for medicines or foodstuffs which has an insert for desiccants (3) which is positioned in the container opening and secured against being moved further into the container. In an initial state, i.e. before use of the container, the container opening is sealed by a foil (17). After removal of said foil, the closing device (7) is moved in the direction of the desiccant insert, for example by rotating a screw cap as far as a stop end, so that the coupling means (11, 18) of the closing device and the insert engage, thus producing a non-positive connection between each other in an axial direction.
