Abstract (en)
[origin: WO0015529A1] Apparatus (1, 1') for the collection, distribution and storage of flexible laminar elements, in particular of industrial hides (P) during various phases of their production, including a first support unit (2) and a second hide handling unit (3), adapted to be operatively supported by the first unit (2), the first and second units being provided with releasable connecting elements (7, 8, 9, 10) to allow their transfer both jointly and separately, the second unit including two rotating cylinders (18, 21) with substantially parallel axes, and flexible conveying device (22) for loading, unloading and stocking hides (P), said conveying device being provided with two extremity portions each respectively fixed to one of the cylinders.
