Abstract (en)
[origin: US6578229B1] The present invention relates to a device for removing joint filler and a method of using the same. The device includes a body member and a peeling element located adjacent to the front end of the body member. The peeling element includes at least two peeling points, where the first peeling point is located proximate to the topside of the peeling element and the second peeling point is located proximate to the underside of the peeling element. The device also includes an opening located between the peeling element and body member.
