Abstract (en)
[origin: WO0068612A1] This invention concerns a lamp containing a fluid. The novelty is the connection between emitted light and fluidity effect, this effect being similar to reflection of light through an agitated liquid. The device is composed of a light source (1), a fluid (2), a container with transparent surfaces (3) and a mechanism (4) situated inside or outside the fluid for stirring it. The light source (1) may be placed vertically to the fluid surface in order to obtain a greater effect.
