Abstract (en)
[origin: WO0014466A1] The invention relates to a seal (21) for a door (14) of a refrigerator or freezer device or similar, comprising a seal head (31) and a seal base (22). Said seal base is connected to the seal head by walls (29, 30) and is fixed in an undercut receiving groove (18) in the door and located so that it is laterally offset from the seal head. The seal base also has a guiding wedge (23) and is equipped with hook-type fixing noses (24, 25, 27) whose free ends point away from the guiding wedge and which are supported on the walls of the receiving groove. The seal base has at least three hook-type fixing noses, two of which are at least essentially identical in length and are situated close to the guiding wedge and opposite each other, forming an arrow head-type segment with said wedge. The third fixing nose (27), whose free end is turned towards the seal head, has a stump type configuration and a more obtuse intermediate angle with the vertical than the two other fixing noses (24, 25) and the fixing nose (25) that is mounted in front of the stump type fixing nose can pivot into an intermediate area that is provided between the two fixing noses.
