Abstract (en)

[origin: WO0103093A1] The invention relates to a situation detecting device for recognizing the blocking of doors (6, 8), gates and the like, which can be used in emergency exit systems. The door (6, 8) or the gate or parts of a door or gate are equipped with a device in the form of an identification module (7, 10, 11, 13) that reproduces the states of a definable and modifiable area to be monitored within a passageway area in front of and/or behind the door (6, 8) with the purpose of recognizing blocking.
