Abstract (en)
[origin: FR2782877A1] The invention concerns an automatic system for sound and image recording in particular for videoconference, comprising means controlling (20) image and sound recording sensors (10) and sequence analysing means (40) monitoring said control means (20) to obtain automatic framing of the sequence being filmed. The invention is characterised in that an intelligent interface is provided for selecting a person or a group among the persons in the filmed sequence, at the request of a participant, and automatic framing (30) on the basis of data supplied by the sequence analysing means (40), on the selected person or group. The invention is applicable to videoconferencing.
