Abstract (en)
The present invention provides (1) a removal material for cannabinoids present in body fluids where at least one substance from amongst substances with functional groups capable of hydrogen bonding, substances with hydrophobic functional groups, substances having cationic functional groups and physiologically active substances, is immobilized on a water-insoluble carrier, and (2) a cannabinoid removal column characterized in that it incorporates an aforesaid material (1). In accordance with the present invention, cannabinoids present in, for example, the blood, can be selectively removed.
