Abstract (en)

[origin: EP1110727A1] The cylinder (1) has on its sleeve a supply opening (5) and a supply part (6) which can be fitted on same by an operating element (10) controllable independently of switching on the pressurised medium. The supply part has a connection (7) and outlet (8) for the pressurised medium. The supply opening and outlet are connectable and when the supply part is fitted on the outlet (8) and the supply opening (5) fit over each other and lock the cylinder against rotation. The supply opening and outlet can be designed as a pair of cones. The supply opening has a bore with inner cone and the outlet is formed on an outer cone.
