Abstract (en)
[origin: EP1111133A2] The device comprises a frame shoe profile (101) which can be mounted on one end of a slab (10), to which a threaded rod (111) is secured. The rod is screwed into a connecting tensile part (300) which is also screwed to an identical rod (211) secured to a frame shoe profile (201) mounted on the end of an adjacent slab. Twisting the tensile part will bring the two slabs together.
