Abstract (en)

[origin: EP1111165A1] The handle includes a cam (38) and an actuating lever (44) which is rotatably connected and pivotably mounted about an axis (A2) of the support (14) of the handle, parallel to the axis (A1) of the pallet (16). The manipulating pallet has a drive finger (24) which cooperates with the control surface (42) of the cam, in a manner such that, in the unlocking interrogation position, the actuating lever activates the unlocking switch (34) and, in the locking interrogation position, the actuating lever actuates the locking switch (36).
