Abstract (en)
[origin: EP1111168A2] The device has a lock and an associated closure part (4) with a closure bolt (3) that is secured by a holder, e.g. a rotary catch, in the closed state of the closing device. The closure part has a sensor (6) for detecting the closed state with a force or pressure sensitive sensor element mounted on the closure part. The lock has an inlet slot or capture bearing into which the closure bolt can be moved in the closing direction (S). Independent claims are also included for the following: a method of detecting a closed state of a motor vehicle door closing device.
