Abstract (en)

The present patent consists of an improved selector for door-closers on doors with two leaves which has the novel characteristic that the internal mechanism of the selector has a central body defined by two half-bodies (15,16), between which there is a partition (18) perpendicular to a strip (12) connecting and pulling along two end shoes (13,14), and respective rods (29,30) acting in accordance with the movements of the two half-doors (33,34). <IMAGE>
