Abstract (en)

[origin: EP1111785A1] This invention relates to an electrical device for self-clocked controlled pseudo random noise (PN) sequence generation and comprising a plurality of sequence generation means adapted to: output a plurality of sequence values (Zt) on the basis of a plurality of clock values (Ct), wherein said electrical device further comprises: step pattern generation means (202) adapted to select a step pattern, comprising said plurality of clock values (Ct), from a plurality of possible step patterns on the basis of a step pattern select signal (Wt). Hereby, a flexible and efficient self-clocked controlled pseudo random noise (PN) sequence generation is obtained. This invention also relates to a method of self-clocked controlled pseudo random noise (PN) sequence generation. <IMAGE>
