Abstract (en)
[origin: US6629914B1] The invention concerns a device for positioning a plate (3) on a roll (1), in particular a chopper or folding roll. Said device is characterized in that the roll is provided with magnetic fixing means maintaining the plate on the surface thereof, and two centring elements whereof at least one (9) is mobile and longitudinally spaced apart from the first, so as to cooperate with matching means maintaining the plate (3), the mobile centering element (9) being linked to control means (15) for displacing it along the transverse axis of the roll (1).
